

CAM Reconciliation Review Checklist

Catch high-risk CAM errors before statements reach tenants.

Phone Summary

- Use this when you need to catch high-risk CAM errors before statements reach tenants.
- Start with the first two checks on your phone. Finish the workbook or packet on desktop.
- Keep the lease excerpt, GL export, rent roll, and reviewer approval with the final file.
- Next step: run the same check in CapVeri during a 30-day trial.

Best use pre-send reconciliation QA	Resource type PDF	Review time 15-30 minutes
---	-----------------------------	-------------------------------------

This resource is an operational aid, not legal advice. Confirm final CAM billing positions with the governing lease and counsel where required.

Practical Review Workflow

Step	Checkpoint	What good looks like
1	Confirm lease authority	Tie the promised recovery method to signed lease language.
2	Validate source data	Reconcile GL exports, rent rolls, and prior-year true-up data before billing.
3	Review allocation logic	Check pools, denominators, exclusions, caps, gross-up, and admin fee bases.
4	Package support	Attach variance notes and source support before a tenant has to ask.
5	Escalate exceptions	Route legal, compliance, or material-dollar issues to the right reviewer.

High-Risk CAM Checks

- Confirm excluded expenses are removed before tenant share calculations.
- Separate fixed costs from variable costs before applying gross-up language.
- Document year-over-year variances that would draw a tenant auditor's attention.

Evidence To Keep With The File

- Signed lease or amendment excerpt supporting the recovery method.
- GL export, allocation pool summary, rent roll, and supporting invoice references.
- Reviewer sign-off showing who approved exceptions and why.

Reviewer Sign-Off Prompts

- What changed materially from the prior year, and is the explanation tenant-ready?
- Which line items are most likely to be challenged, and where is the support stored?
- Does the final package show the calculation path from source totals to tenant amount due?

Common Failure Modes

- A lease exclusion is mapped to the wrong GL account and recovered anyway.
- A denominator changes after a suite remeasurement without an approval trail.
- A cap or expense stop is applied after gross-up instead of at the lease-defined step.

Worked Example

- If recoverable CAM rises from \$390,000 to \$450,000 and the tenant share is 8.5%, the tenant-facing variance note should explain the \$5,100 share movement before the statement is issued.
- Attach the GL export, rent roll denominator, lease excerpt, and reviewer approval so the number can be traced without rebuilding the file.

Quality Gate

- Before sending, confirm the workbook or packet ties to source reports, lease authority, reviewer initials, and a dated final archive copy.
- Escalate unresolved exclusions, manual overrides, legal interpretation, or tenant-specific concessions before relying on the output.

CapVeri Follow-Up

- Use CapVeri when you need deterministic CAM math, lease-aware validation, and audit-ready export packages across a portfolio.
- Start a 30-day trial at <https://app.capveri.com/auth/register>.
