

● CRE FINOPS CONTROL PLATFORM

Find, verify, and defend every recoverable dollar.

CapVeri helps commercial landlords control the full CAM and lease-recovery workflow: reconciliation, leakage detection, cap enforcement, lease extraction, GL analysis, portfolio exceptions, compliance support, and tenant dispute defense.

Revenue recovery

Find leakage from CAM pools, caps, admin fees, pro-rata shares, base years, gross-up logic, and billing variances.

Portfolio controls

Track recurring close, anomalies, cap banks, NOI impact, HCAD tax protest normalization, warranty and COI exposure.

Audit-ready defense

Produce reports, exports, tenant portal workflows, compliance packets, demand letters, and immutable audit trails.

Built for property controllers, asset managers, CFOs, CEOs, and technical leaders who need faster close, cleaner evidence, and fewer spreadsheet-dependent revenue controls.

[Start Free Audit](#)

The core problem: recoverable revenue is trapped in fragile workflows.

Most commercial landlords already have the data. The failure point is the control layer around it: amended lease terms, expense pools, occupancy denominators, cap logic, base-year treatment, compliance rules, dispute records, and spreadsheet formulas drift away from what the lease actually allows.

WHAT BREAKS

- Gross-up factors applied to fixed expenses that should not be grossed up.
- Caps calculated from the wrong base year, cap type, or amendment version.
- Pro-rata shares that miss mid-year move-ins, expansions, contractions, or denominator changes.
- Errors that compound year after year because old workbook logic is copied forward.
- GL anomalies, CapEx screening, tax normalization, compliance exports, and tenant audit packets handled manually after risk appears.

WHAT CAPVERI CHANGES

A control layer for landlord revenue operations.

CapVeri sits beside the existing property management system and turns exports into verified findings, portfolio exceptions, defensible calculations, compliance support, and evidence that finance, operations, and legal teams can use.

CFO

Recover NOI and reduce dispute exposure.

Model annual benefit from leakage recovery, cleaner close, tax normalization, cap controls, and fewer escalated disputes.

CTO

Approve without an integration project.

No direct ERP API. No replacement of core accounting systems. Financial math is deterministic; AI is limited to extraction workflows with human review.

CEO

Turn CRE FinOps from seasonal cleanup into operating leverage.

Faster answers, fewer surprises, and a credible path from first audit to portfolio-wide revenue control.

The practical decision

If one building is clean, you have evidence that your process is sound. If CapVeri finds leakage or logic errors, you have a quantified business case for rollout.

One workflow for recovery, exceptions, compliance, and defense.

CapVeri is intentionally designed as an anti-integration workflow. Your team uses the reports they already pull for close, CAM season, tax review, or tenant support, then CapVeri validates the logic and turns exceptions into action.

WHAT CAPVERI COVERS

Technology posture

No ERP replacement, no direct API dependency, deterministic financial math, human-reviewed extraction, organization-scoped controls, and exportable evidence for every finalized workflow.

Start narrow. Expand into the full CRE FinOps control layer.

Every self-serve plan includes a 30-day free trial with no credit card required. Pricing below reflects the current CapVeri pricing file last updated April 29, 2026.

STARTER Reconcile	\$99/mo \$990/year Up to 50 active rentable units GL import, CAM reconciliation, leakage summary, expense pools, lease versioning, rent roll upload, summaries, CSV exports, and unlimited team members.	PORTFOLIO Control	\$249/mo \$2,490/year Up to 250 active rentable units Adds portfolio dashboards, cap bank tracking, YOY trends, anomaly alerts, PDF and Excel exports, NOI impact, HCAD normalization, AI lease extraction, AI GL analysis, CapEx screening, warranty tracking, and COI tracking.
DISPUTE READY Defend	\$499/mo \$4,990/year Up to 500 active rentable units Adds tenant self-serve portal, dispute management with audit trail, California SB 1103 compliance export, Texas and California demand letters, audit defense package, and priority support.	SCALE Enterprise	Custom Portfolio pricing 501+ units or 50+ buildings Includes the full Defend workflow plus dedicated customer success, custom SLA, white-glove onboarding, and portfolio rollout planning.

RECOMMENDED PATH

Run the free audit first.

Use one building to validate the finding rate, data quality, operator fit, and internal business case. Move to Control for recurring portfolio close, anomaly management, and tax/COI workflows; move to Defend when tenant scrutiny or compliance risk is material.

ROI FRAME

Annual benefit = recovery + control value + dispute avoidance.

For CFO review, model recoverable pool x leakage rate x capture rate, then add avoided escalation cost and operational control value from cleaner documentation, faster exception review, and stronger compliance records.

CapVeri wins by verifying the systems you already use.

The market is full of systems that store property data, run accounting, manage leases, or support accounting teams. CapVeri is narrower and sharper: an independent CRE FinOps control layer without requiring a platform replacement.

	What they are good at	Where decisions stall	Why CapVeri wins
Yardi, MRI, RealPage	Core property management, accounting, leasing, and broad operational workflows.	CAM logic depends on configuration quality, staff knowledge, and module setup. Replacing or extending the system can become a long IT/vendor project.	Keep the ERP. CapVeri independently audits exports, catches drift, manages exceptions, and produces traceable findings without API integration.
Spreadsheets	Flexible, familiar, and fast for one-off analysis.	Formula drift, weak version control, hidden workbook assumptions, and fragile handoffs when staff changes.	CapVeri preserves operator speed while adding consistent calculation logic, audit trails, snapshots, portfolio visibility, and repeatable exception workflows.
Consultants and BPO	Useful for complex cleanups, historical reviews, and outsourced accounting capacity.	Expensive to repeat, hard to scale across every building every year, and dependent on external availability.	CapVeri turns recurring checks into software. Use consultants for exceptions, not for every routine reconciliation, variance review, or defense packet.
Lease accounting platforms	Centralize lease records and support accounting compliance workflows.	Often not purpose-built for landlord-side CAM leakage, gross-up, cap bank, pro-rata, and tenant dispute packet workflows.	CapVeri focuses on landlord recovery accuracy, operational exceptions, tenant evidence, and compliance support, not general lease accounting alone.

Positioning

Not an ERP. Not another spreadsheet. Not a tenant-auditor tool. CapVeri is the landlord's control layer for CRE revenue accuracy.

Proof mechanism

The product creates trust by showing inputs, formulas, exceptions, finalized snapshots, and exportable support.

Switching logic

The first audit removes buying anxiety. Prospects do not need to migrate systems to see whether the value exists.

Source checks: official pages from Yardi, MRI, RealPage, and Visual Lease support the category comparison. CapVeri is positioned as the landlord-side CRE FinOps control layer, not a replacement property management system.

What a leadership team needs to approve CapVeri.

The safest buying motion is measurable: pick one representative building, run the audit, review the output with finance and operations, then approve rollout based on findings, exception coverage, and control value.

PILOT SUCCESS CRITERIA

Criterion	Executive question
Data fit	Can our team produce the required exports without IT or vendor tickets?
Finding quality	Are the flagged issues material, explainable, and tied to lease logic?
Operator workflow	Can property accounting use this during CAM season without adding complexity?
Evidence quality	Would we be comfortable sending the support to a tenant, auditor, or attorney?

OBJECTIONS ANSWERED

"We already use Yardi/MRI."

Good. CapVeri audits exported outputs; it does not require replacing your source system.

"Spreadsheets work fine."

Run one building free. If the findings are clean, you lose nothing and gain confidence.

"How do we trust the math?"

Financial calculations are deterministic and traceable. AI does not perform committed money math.

Recommended next step: Start Free Audit

Choose one representative property, upload existing exports, and review the finding packet. If CapVeri identifies recoverable leakage, exception risk, compliance exposure, or control gaps, use that packet as the internal business case for the right plan.

For finance

Quantified leakage, NOI impact, cap bank logic, tax normalization, and audit-ready support.

For operations

Repeatable reconciliation, anomaly, lease, warranty, COI, and dispute workflows that fit current export habits.

For technology

No ERP replacement, no direct API dependency, and clear data-control posture.

Prepared as executive-facing sales collateral for CapVeri. Public claims use current repository pricing and documented CapVeri messaging. Monetary ROI examples should be modeled with prospect-specific portfolio data before proposal use. Contact: <https://www.capveri.com>
