

BOMA 2024 Calculator Companion

Use alongside the in-browser calculator to document rentable-area assumptions.

Phone Summary

- Use this when you need to use alongside the in-browser calculator to document rentable-area assumptions.
- Start with the first two checks on your phone. Finish the workbook or packet on desktop.
- Keep the lease excerpt, GL export, rent roll, and reviewer approval with the final file.
- Next step: run the same check in CapVeri during a 30-day trial.

Best use BOMA 2024 remeasurement	Resource type PDF	Review time 15-30 minutes
--	-----------------------------	-------------------------------------

This resource is an operational aid, not legal advice. Confirm final CAM billing positions with the governing lease and counsel where required.

Practical Review Workflow

Step	Checkpoint	What good looks like
1	Capture current rentable area	Record the current standard, measurement date, and source plan set.
2	Enter BOMA 2024 assumptions	Document common-area allocations, exclusions, and measurement treatment.
3	Compare tenant share	Calculate denominator and share changes before changing CAM statements.
4	Model NOI effect	Translate area change into recoverable CAM and valuation impact.
5	Approve implementation	Keep broker, asset manager, and legal sign-off with the measurement file.

High-Risk CAM Checks

- Confirm excluded expenses are removed before tenant share calculations.
- Separate fixed costs from variable costs before applying gross-up language.
- Document year-over-year variances that would draw a tenant auditor's attention.

Evidence To Keep With The File

- Signed lease or amendment excerpt supporting the recovery method.
- GL export, allocation pool summary, rent roll, and supporting invoice references.
- Reviewer sign-off showing who approved exceptions and why.

Reviewer Sign-Off Prompts

- What changed materially from the prior year, and is the explanation tenant-ready?
- Which line items are most likely to be challenged, and where is the support stored?
- Does the final package show the calculation path from source totals to tenant amount due?

Common Failure Modes

- A lease exclusion is mapped to the wrong GL account and recovered anyway.
- A denominator changes after a suite remeasurement without an approval trail.
- A cap or expense stop is applied after gross-up instead of at the lease-defined step.

Worked Example

- If recoverable CAM rises from \$390,000 to \$450,000 and the tenant share is 8.5%, the tenant-facing variance note should explain the \$5,100 share movement before the statement is issued.
- Attach the GL export, rent roll denominator, lease excerpt, and reviewer approval so the number can be traced without rebuilding the file.

Quality Gate

- Before sending, confirm the workbook or packet ties to source reports, lease authority, reviewer initials, and a dated final archive copy.
- Escalate unresolved exclusions, manual overrides, legal interpretation, or tenant-specific concessions before relying on the output.

CapVeri Follow-Up

- Use CapVeri when you need deterministic CAM math, lease-aware validation, and audit-ready export packages across a portfolio.
- Start a 30-day trial at <https://app.capveri.com/auth/register>.
